**UPCAST**  
PROJECT

There are already many companies offering data, and data-driven digital products and services in the market nowadays

## Data markets do not seem 100% neutral...

Data marketplaces often complement other services: cloud, data management, or even data or digital services.

Some of these services may involve the processing of data they intermediate...  
... or consulting on pricing and data sourcing.

From centralised general-purpose to federated specialised data marketplaces.

## **Data markets do not seem 100% neutral...**

Data marketplaces often complement other services: cloud, data management, or even data or digital services.

Some of these services may involve the processing of data they intermediate...  
... or consulting on pricing and data sourcing.

From centralised general-purpose to federated specialised data marketplaces.

## **... and some challenges lie ahead in cutting-edge research in the área:**

How do we deal with Federated or Machine Learning Marketplaces?

Can DISPs resort to data pricing mechanisms that may require processing?

May confidential processing of data be considered neutral?

# Thank you! Q&A time!
